

Your protocol in the participant's hands, *every week between visits.*

Guided digital support tailored to each protocol, cohort, and follow-up window, carried from first contact through the final assessment. An orbit is designed backwards from accrual, retention, and assessment window adherence, and reports back on every participant. No app, no login, no new FTEs.

What between-visit attrition costs a study today

- **Participant attrition.** 40–60 % drop out before study completion, climbing with study length and follow-up burden.
- **Coordinator hours.** Reminder calls, rescheduling, and chasing forms, valued at loaded staff cost.
- **Between-visit contact.** 70%+ of research teams report difficulty maintaining it, and the stretch between visits is where a protocol lives.
- **Missed assessment windows.** An off-window data point is often not usable at all.

How an orbit provides value

- 01 Enrollment against target.** Eligible people screened, consented, and reaching baseline, tracked against the accrual curve the protocol assumed.
- 02 Time to full accrual.** The months between first contact and a closed enrollment window, and what a shorter one is worth to the budget.
- 03 Consent comprehension.** Whether a participant can say what the study asks of them after they signed, not just that a signature exists.
- 04 Baseline completion.** The share of consented participants who finish every baseline instrument inside the protocol window.
- 05 Assessment window adherence.** On-time completion at each scheduled follow-up, the measure that decides whether a data point is usable at all.
- 06 Retention at final follow-up.** How many participants are still reachable and still on protocol when the last window opens.

PLATFORM EVIDENCE, FROM THE CONTROLLED TRIAL

Patients arrived better prepared, called less, and came back less

–41%
readmissions

–53%
calls to the office

+65%
understanding of the
plan and what to expect

+22%
patient satisfaction

navigated their
journey better

CareOrbit controlled clinical trial, Siteman Cancer Center.

Pick one journey. *Prove it in a quarter.*

The orbit home screen as your participants see it, in your institution's brand and voice. Opens in the phone's browser, with no app download required.

STEP ONE: PICK THE STRETCH OF THE STUDY

The stretch that is losing people: recruitment, consent and baseline, or long follow-up.

- **Recruitment support.** Before someone is a participant.
- **Consent and baseline.** Plain-language onboarding.
- **Follow-up retention.** The long stretch of assessments.
- **Multi-study scale.** Concurrent studies on one platform.

STEP TWO: SHAPE IT WITH THE RESEARCH TOOLKIT

ENGAGE, ASSESS, and Data slot into the stretch you pick: validated instruments like the PHQ-9 and GAD-7 plus researcher-defined ones, scheduled or triggered delivery, branching logic, and real-time structured capture. We configure it to your protocol for your team's review.

STEP THREE: WE MEASURE AGAINST YOUR BASELINE

A pilot cohort stands up in weeks. We deliver enrollment, window adherence, retention, and coordinator hours returned, against the accrual curve your protocol assumed.

ZERO DISRUPTION

Nothing added to anyone's day

- **No new FTEs.** Nothing added to a coordinator's week, and no portal logins to administer.
- **White-label.** Your study, your institution, your voice.
- **IRB-ready.** A full audit trail for every participant interaction.
- **HIPAA-compliant, BAA-ready.** Non-disruptive to the workflows and I.T. you already run.
- **Stands up in weeks, not months.** From kickoff to first participant.
- **REDCap, Epic, and API.** Structured exports into your research systems.

FOR THE RESEARCH TEAM

You can finally see it

- Who opened their orbit and who never did, by participant
- Disengagement surfaced while the assessment window is still open
- Completion, drift, and dropout risk by site, cohort, and coordinator

Engagement
Index Score
What is this?

91

Every participant carries an engagement score your coordinators can act on.

The next move: 20 minutes discussing *your* study retention risks and *our* platform.

No demo script, no obligation. We hear which moments are costing your studies the most, and give you a brief look at the platform.
