

Your plan of care in the patient's hands, *every day between visits.*

Guided digital support tailored to each condition, procedure, and protocol, carried from diagnosis through rehab and lifelong management. Engagement is tracked at every step, so patients understand how and why to stay on track and your team knows who needs a nudge. No app, no login, no new FTEs.

Orbits are issued simply via text or email, and open in the patient's own browser on any device. No downloads or updates ever required.

The understanding gap: a lifetime condition, managed in twenty minutes a month

None of these are decided in your clinic. Each one turns on whether a patient understood the plan, kept taking the medication, recognized a warning sign, or showed up for rehab, in the weeks when no one was there to tell them.

How an orbit provides value

- 01 Fewer 30-day readmissions.** The costliest between-visit failure in cardiology, and the one CMS penalizes directly.
- 02 Higher cardiac rehab enrollment.** A referral that never becomes an enrollment is billed to nobody and helps no one.
- 03 Higher rehab completion.** Completion is where the mortality benefit lives, and where most programs leak patients.
- 04 Better medication adherence.** Cardiac regimens only work when they are taken, and nobody sees the bottle between visits.
- 05 Fewer inbound calls per episode.** Every repeat call is nursing time spent re-explaining what was already covered.
- 06 Earlier symptom recognition.** A patient who calls about three pounds of weight gain costs a phone call, not an admission.

navigated their
journey better

CareOrbit controlled clinical trial, Siteman Cancer Center.

Pick one journey. *Prove it in a quarter.*

The orbit home screen as your patients see it, in your program's brand and voice. Opens in the phone's browser, with no app download required.

STEP ONE: PICK YOUR JOURNEY

Most cardiology programs start with procedure support or rehab. All four run as one guide the patient keeps.

- **Procedure support.** Bypass, valve, ablation, device implant, cath lab.
- **Cardiac rehab.** Getting referred patients to start, and to keep coming.
- **Heart failure.** Daily weights, fluid and sodium limits, titration.
- **Prevention and risk.** Screening and referral before they are a patient.

STEP TWO: SHAPE IT WITH ORBIT SOLUTIONS

A Cardiology Department Bundle gives you 9 procedure and condition orbit versions for patients and families, plus a template for the rest, from bypass and valve to rehab and Heart Health. Each is versioned to precisely match your protocols and content for your launch. We build it for your team's review.

STEP THREE: WE MEASURE AGAINST YOUR BASELINE

Live in about 90 days. We deliver engagement, completion, and the operational numbers you named, against your baseline, inside a quarter.

ZERO DISRUPTION

Nothing added to anyone's day

- **No new FTEs.** Nothing added to anyone's day.
- **Live in a quarter.** From kickoff to first patient.
- **No risk, no lock-in.** And no disruption to your offices.
- **White-label.** Your brand, your voice.
- **HIPAA, SOC 2, HITRUST.** Documentation ready for review.
- **EHR-friendly.** A scheduled flat file, or nothing at all.

FOR THE PROGRAM

You can finally see it

- Who opened their orbit and who never did, by patient
- Symptom check-ins routed back before the next visit
- Engagement and completion by cohort and by site

Engagement
Index Score
What is this?

91

Every patient carries an Engagement Index Score your team can act on.

The next move: 20 minutes discussing *your* cardiology pain points and *our* platform.

No demo script, no obligation. We hear which moments are costing your program the most, and give you a brief look at the platform.
