

DATA

Every action, and every inaction, becomes *a signal your team can act on.*

Every action a patient takes, and every one they do not, becomes an engagement signal your teams can act on. Data begins with your first orbit, and you own your own data. No new dashboards to learn, no data project to stand up, no new FTEs.

Track. Index. Align. Optimize.

- **Track every action, and inaction.** What was opened, completed, skipped, and when, from the first patient in your first orbit.
- **Align with outcome metrics.** Readmissions, program starts, completion, satisfaction: engagement becomes a leading indicator.
- **Generate the engagement index.** Behavior scored against the ideal pattern that supports an ideal care journey.
- **Optimize every journey.** Proprietary AI-based tools keep tuning each patient's experience toward what works.

The engagement index: a number that means on track

One index per patient, per journey

- 01 Actions and inactions.** Opens, completions, skips, and silences. Every signal counts, including the missing ones.
- 02 Scored against an ideal.** A predetermined ideal engagement pattern defines what on track looks like for each journey.
- 03 One readable number.** An index per patient and per cohort, so a navigator sees who needs a call today.
- 04 Tied to outcomes.** Aligned with your outcome metrics, so engagement predicts results instead of describing activity.
- 05 Proactive.** Falling engagement surfaces before it becomes a missed appointment.
- 06 Human.** The index points your team to the right patient. People make the call.

YOURS FROM DAY ONE

It begins with your first orbit, and it is yours

Orbit one

data begins with your first orbit, no separate project

Patient-level data stays inside your governance. HIPAA, SOC 2, and HITRUST documentation ready for review.

Yours

patient-level data owned by you, never sold or shared

Zero

new dashboards to learn or data projects to stand up

De-identified

Data Insights uses aggregated data only

Comes with your first orbit.

Grows with every one after.

An example Engagement Index, as your team sees it: every patient scored, routed by role and urgency.

STEP ONE: YOUR FIRST ORBIT STARTS THE DATA

There is no separate data project to stand up. Engagement data starts accruing the moment your first orbit launches.

- **Included from orbit one.** Engagement data starts accruing the moment your first orbit launches.
- **Owned by you.** Patient-level data stays yours. CareOrbit never sells or shares it.
- **Reported your way.** By journey, service line, cohort, or program, aligned to the metrics you already use.
- **Committee ready.** Reporting your quality and program leaders can take into the room.

STEP TWO: THE ENGAGEMENT INDEX

Behavior is scored against a predetermined ideal engagement pattern. One index per patient, per journey, readable at a glance and aligned with the outcome metrics you already report on.

STEP THREE: ALWAYS OPTIMIZING

AI-based engagement tools keep tuning timing, channel, and content per patient, and falling engagement surfaces before it becomes a missed appointment. The index points your team to the right patient. People make the call.

ZERO DISRUPTION

Nothing added to anyone's day

- **No new FTEs.** Nothing added to anyone's day.
- **Included from orbit one.** No separate data project.
- **You own your data.** Inside your governance, from day one.
- **White-label.** Your brand, your voice.
- **HIPAA, SOC 2, HITRUST.** Documentation ready for review.
- **EHR-friendly.** A scheduled flat file, or nothing at all.

DATA INSIGHTS

Insights as a service

- For health systems: how engagement patterns differ across journeys, populations, and programs
- For life sciences and payers: how patients actually navigate the journeys their products and plans depend on
- Always de-identified and aggregated. Never your patients, never your patient-level data

Engagement
Index Score
What is this?

91

Every patient carries an Engagement Index Score your team can act on.

The next move: 20 minutes seeing the engagement index on *a real journey*.

No demo script, no obligation. Bring one care journey and the outcome metrics you already report on, and we will show you what Data adds from the first orbit.
