

Your guidance in every patient's hands, *all year between visits.*

A year of health is managed in a few short visits; the rest happens at home, from memory. A primary care orbit adds a consumer-grade digital mentor alongside the after-visit summary and the follow-up call: engaging video, email, and text outreach in your brand and your clinicians' words, with engagement tracked at every step.

FOR THE PATIENT

A clear understanding of their conditions and plan. Your instructions and reminders on the day each one applies. Which symptoms mean call us, and which mean go to the ED.

FOR YOUR TEAM

Ordered from the workflow you already run, no new FTEs. Fewer calls asking what the visit already covered. Your brand and your protocols, not a generic app.

FOR THE PRACTICE

Who opened their orbit and who never did, by patient. Check-ins routed back before the next visit. Optional validated measures, scored automatically.

RE-ADMISSION RATE VS
USUAL CARE

+22%

PATIENT SATISFACTION

Measured against usual care in hepatobiliary surgical oncology at Siteman Cancer Center and Washington University. Applied to a primary care panel, these percentages are a modeled transfer, not a measured primary care result.

Primary care journeys an orbit can carry

01 Healthy Life
general + senior + community

02 Annual wellness visit
Medicare AWV + adult physical

03 Hypertension
readings, medications, lifestyle

04 Type 2 diabetes
newly diagnosed + ongoing

05 Preventive screening
colorectal, breast, cervical, lung

06 New patient welcome
onboarding into the practice

07 Post-discharge follow-up
the handoff back to primary care

08 Asthma & COPD
technique, triggers, action plans

09 Vaccination & seasonal readiness
routine + seasonal

Targeted outcomes

Fewer missed appointments · closed care gaps · better chronic condition control · better medication adherence · fewer avoidable ED visits · fewer inbound calls · higher annual wellness visit completion · new patient acquisition and retention. Every orbit is built and tracked against the outcomes your practice chooses, from the first patient forward.

How it deploys

Issued from the workflow you already run: the CareOrbit app, a scheduled flat file from any EHR, a patient list, a QR code, or a text message. No new app or login for the patient. No new FTEs. White-label, in your brand and your clinicians' voice. Live in a quarter, from kickoff to first patient.

Industry rates from CDC, CMS, and published analyses, not CareOrbit outcomes. Rates vary substantially by practice and payer mix.

Aligned with employer-based plans FOR EMPLOYERS AND PLAN SPONSORS

When a new plan or primary care benefit is introduced, an orbit adds to the enrollment packet and the benefits meeting: a guided introduction at open enrollment that improves employee acceptance of the change, onboarding for employees and families into the new benefit, and reinforcement through the year of covered preventive visits, screenings, and in-network care. Employer-branded versions can be issued by worksite or plan population, with engagement visible to the benefits team.
